

Annex to UNITAID EB17 Resolution 12 (PSI ACTWatch)

Clarifications/ Issues to be addressed:

Notwithstanding other information and clarifications that may be sought as part of the grant agreement and project plan development process, the Secretariat and/or the PRC specifically requires:

Epidemiology of malaria in the selected countries

1. Provide malaria epidemiological data for the target countries from a standard source. Specifically, please provide a table with country-level data on key malaria indicators (prevalence, incidence, mortality, morbidity rates, disease notification and other relevant malaria indicators). Where possible, please provide disaggregated data for “vulnerable” population(s) and/or specific target groups, for example, urban/rural, minority, gender.
2. Include a short description of the possible future trends in disease burden that are relevant to the proposal.

Information

1. Provide any mid-term and final evaluation results/reports of ACTwatch1.
2. Describe what efforts will be made to access and share data between ACTwatch and data from other sources, including data from pilot projects, to assist in interpretation of results and to increase their leverage.
3. Clarify how information and data generated by the project will be shared with a wide range of audiences (e.g. ministries of health, ministries of finance, NGOs, international agencies, academics, etc.) in order to maximize their utility.
4. Clarify what steps will be taken to ensure that appropriate barriers are in place between the ACTwatch2 and the PSI RDT scale-up project to ensure that ACTwatch2 data can be used as an independent source of M&E data for the RDT scale-up project.
